

Prasanth Narayanan

IT Infrastructure & Systems Engineer | Windows | Azure | VMware | DR | Automation

System Analyst supporting enterprise Windows server estates, VMware virtualization, and hybrid **Azure IaaS** environments. Manages patching, vulnerability remediation, disaster recovery, and **ServiceNow**-based incident resolution across thousands of servers serving critical business applications. Strengthens stability through PowerShell automation, Splunk monitoring, and mentoring for L1/L2 engineers.

Work Experience

2015-12 -
Current

System Analyst

NatWest Group, Bengaluru, KA

- Manage and support large-scale enterprise infrastructure comprising **thousands of Windows servers** running critical business applications, ensuring high availability and performance
- Act as Subject Matter Expert (SME) for **Windows Server Administration, failover clustering, RAID configurations, and virtualized environments (VMware vSphere, vCenter)**
- Perform day-to-day administration of **virtualized infrastructure**, including monitoring, capacity planning, and performance optimization
- Azure Virtual Machines Provisioned, configured, and managed Azure VMs for enterprise workloads, ensuring high availability and performance across hybrid environments.
- VM Scale Sets: Implemented and optimized Azure VMSS with autoscaling and load balancing to support elastic workloads and cost efficiency.
- Identity & Access Management: Configured Azure AD, RBAC, and conditional access policies to strengthen identity security and compliance.
- Lead **enterprise patching and vulnerability management**, ensuring compliance and security across server estate
- Collaborate with **storage, backup, and disaster recovery teams** to ensure seamless operations and continuity.
- Drive and participate in **disaster recovery planning, testing, and critical restore activities**, supporting business
- Handle **priority incidents (P1/P2)** via ServiceNow, coordinating calls, managing escalations, and ensuring resolution.

Skills

Technical Skills

- Windows server administration
- System administration
- VMware vSphere
- PowerShell scripting
- ServiceNow

Infrastructure Operations

- Patch management
- Vulnerability management
- Backup management

- Conduct **root cause analysis (RCA)** for major incidents and implement preventive improvements
- Utilize **Splunk monitoring** for proactive system health checks and incident detection
- Develop and implement **PowerShell automation** to streamline repetitive operational tasks and improve efficiency
- Engage in **Azure IaaS training and cloud initiatives**, supporting hybrid infrastructure environments
- **Mentor and train** L1/L2 engineers and vendor teams, improving service delivery and incident resolution timelines
- Write and maintain **technical documentation and knowledge base articles**

- Disaster recovery planning
- High availability

Cloud Infrastructure

- Microsoft Azure (IaaS)
- Azure virtual machines
- Azure VM scale sets
- Azure Storage Accounts

Languages

English, Hindi, Malayalam, Kannada, Tamil

2010-02 - 2015-12

Systems Engineer

Spiderlogic India Pvt Ltd, Bengaluru, KA

- Managed **Windows Server 2008/2012 environments** along with VMware and Hyper-V virtualization platforms
- Administered **Office 365 and Microsoft Azure cloud solutions**
- Azure VM Creation Project-Designed and implemented Azure Virtual Machines to host enterprise applications, ensuring scalability and high availability.
- Defined Azure VM sizing, OS images, and availability zones based on workload requirements and disaster recovery needs.
- Created and configured VMs using Azure Portal, CLI, and ARM templates, applying security baselines and patching policies.
- Designed and implemented **backup and recovery strategies** using VERITAS and BDR tools
- Supported **SQL Server administration** and Microsoft Dynamics GP installations
- Ensured system stability through proactive monitoring and troubleshooting

2007-05 - 2010-02

Technical Support Engineer

Oracle Financial Services Software Ltd (via CMS Computers Pvt Ltd), Bengaluru, KA

- Supported and administered **600+ client systems** across Windows 2000/2003/XP environments
- Managed **Exchange clusters, domain permissions, and LAN/WAN infrastructure**
- Performed **patching, antivirus updates, and vulnerability management**
- Coordinated with vendors for infrastructure issues and resolution

2006-12 -
2007-03

Engineer
Al Rostamani Group, Dubai (via FVC), Dubai

- Deployed **300+ client systems** using imaging tools (Ghost), improving deployment efficiency
- Monitored **LAN/WAN connectivity and system performance**
- Managed **hardware installations, printer setup, and vendor escalations**

2005-12 -
2006-11

Technical Support Engineer
Tech Mahindra (via Symmetrix Computer Systems), Bangalore

- Installed and configured **operating systems, applications, and virtual environments**
- Provided **troubleshooting support** for hardware and software issues
- Prepared and maintained **technical documentation and support records**

Education

Bachelor of Arts
Calicut University - Kerala

PROJECTS & INITIATIVES

Enterprise Windows Server Patching & Security Compliance, Lead enterprise-wide Windows Server patch management and vulnerability remediation, ensuring compliance with security standards, Strengthened system security posture while maintaining high availability across critical infrastructure, Managed incident recovery calls, RCA documentation, and corrective action implementation, Enterprise OS Upgrade Program (Estate-Wide), Coordinated large-scale Windows OS upgrades across enterprise server estate in collaboration with application and business teams, Delivered multi-phase upgrades ensuring minimal downtime and seamless transition for business-critical applications, Played a key role in planning and coordinating multi-year enterprise upgrade programs, Physical to Virtual Migration (VMware Transformation), Contributed to large-scale

migration from physical servers to VMware virtualized infrastructure, Supported planning and execution of virtualization initiatives, improving resource utilization and scalability, Supporting initiatives aligned with future cloud migration strategies, Disaster Recovery & Backup Operations, Actively involved in disaster recovery planning, testing, and critical restore operations, Partnered with backup and DR teams to ensure data protection and business continuity, Supported regular DR drills and validated recovery procedures, Service Transition & In-House Capability Build, Played a key role in transitioning from vendor-managed support to in-house operations model, Assisted in hiring, onboarding, and ramp-up of internal support teams, reducing dependency on external vendors, Supported UK to India service transition, ensuring knowledge transfer and smooth phased migration, Automation & Operational Efficiency, Developed and implemented PowerShell-based automation solutions for repetitive operational tasks, Collaborated with internal teams to improve efficiency, reduce manual effort, and enhance service delivery, IT Operations & Service Management, Managed priority incidents (P1/P2), coordinated bridge calls, and ensured timely resolution, Administered change management processes via ServiceNow, minimizing operational risks, Led daily standups, knowledge transfer sessions, and team coordination activities

Certifications

Microsoft Specialist, Azure Infrastructure Solutions

MCSA, Office 365

Microsoft Certified, Windows 7 Configuration

VMware Certified Associate, Data Center Virtualization
